

EMSCAP REFERENCE SERIES / PUBLICATION 3

EMSCAP RELEASES NEW UTILITY CONSULTING AND PROCUREMENT HANDBOOK

Released on 15 September 2026, the third EMSCAP handbook brings together utility strategy, data management, tendering, contract administration, cost optimisation and sustainability reporting for multi-site portfolios.

A REFERENCE FOR THE FULL UTILITY CYCLE

The Utility Consulting and Procurement Handbook extends the EMSCAP series beyond voltage optimisation. It follows the full service cycle: establishing site records, validating consumption, comparing retailer offers, negotiating contracts and managing ongoing performance. Electricity, gas, water and embedded networks sit alongside budgets, invoice assurance, renewable sourcing and emissions reporting. Checklists and worked examples support consistent, documented decisions.

25 chapters and 6 appendices

24 sample reporting dashboards

RELEASED SEPTEMBER 2026

WHO SHOULD READ IT

Utility consultants and procurement teams; finance and accounts payable staff; facilities and property managers; energy analysts and sustainability leaders responsible for multi-site portfolios.

TOOLS FOR DELIVERY AND REVIEW

Process diagrams, operational checklists and sample dashboards accompany guidance on governance, data platforms and AI controls. A glossary and annotated bibliography support further study. Examples are illustrative, not claims of customer results.
